

Yaiza Gonzalez-Garcia is an Associate Professor at the Materials Science and Engineering department at Delft University of Technology (TU Delft, The Netherlands). She leads the research on localised corrosion, focusing on studying the relation between the microstructure of metals and corrosion properties. She obtained the MSc degree in Chemistry at the Faculty of Chemistry of the University of La Laguna (Spain) in 2003. After this, she received the PhD-degree in October 2007 at the same university. In 2008, she was awarded a Humboldt Foundation Post-Doctoral Fellowship to research at Christian-Albrecht University of Kiel (Germany). In 2014, she was awarded the Delft Technology Fellowship grant and join to the academic staff of Delft University.

She is a frequent reviewer of high-impact scientific journals. She is the author of more than 45 publications in the field of corrosion, electrochemistry and materials.

She is the main instructor of several courses about corrosion science and electrochemistry for the bachelor and master programs.

Besides her position as an associated professor, she is also the coordinator of the master of Materials Science and Engineering (TU Delft).
